- **& MORE!**

These dates typically range from the Beginning-Middle of **November** to Beginning-Middle of **February**.

Service periods may adjust due to the first freeze and leaf shedding in the area/region.

Can begin as early as October 1st...

These services will benefit your property in many ways, such as leaf/debris removal/mulching helps significantly decrease the chances of your grass and other vegetation catching disease & prevention of mold/fungus growth during these months. Doing so improves soil health that will provide many nutrients for your grass. It also helps maintain a more stable temperature during the freezing and thawing months.

Other services such as bush/hedge trimming, pruning, weeding, & landscape restoration/removal will help tidy up your property for the holidays and the coming Spring & Summer months.

Pruning trees and other ornamental vegetation will benefit them coming back healthier and thicker as well as helping prevent diseases and other potential infection sites of the tree or vegetation|plant|bush. This allows better healing during the months of dormant growth.

Gutter cleaning & Debris removal from your roof top will help prevent build up of debris as well as preventing algae, fungus & moss growth. Keeping your gutters well maintained and roof clear of debris will also help prevent water damage to your roof, foundation, siding, landscaping and plants. Cleaning and maintaining will help better the drainage flow of precipitation such as rain and snow.

Brush removal/clean ups during the fall and winter months will help your property get ahead start on maintaining a sharper look, and doing so also helps prevent disease spreading from one vegetation to another.
